Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (clonelDs 1322376-1323911, 1456007-1456775, and 150052-1502855). Subtraction by Bento Soares and M. Parima Bonaldo.

/site_2: Not!; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (RAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intect mRNA was ligated with backer with drawa such and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 6ont. The CDNA vector was circularized with B. coll DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Odsayama elect method. The

CHOM Library Preparation: M.B. Soares Lab Clone distribution:

Researchers may obtain BMAP CDNA clones from RESEARCH GENETICS. It
should be noted that Bento Soares is generating a small number of
additional specialized non-redundant arrays of BMAP cDNAs whose
availability will be considered under appropriate and limited
collaborative arrangements
                                                                                     Email: szhao@tigr.org
Clones are derived from the mouse BAC library RPCI-23. For BAC
library availability, please contact Pieter de Jong
(pieter@dejong.med.buffalo.edu). Clones may be purchased from
ABCPAC Resources (http://bacpac.med.buffalo.edu/orderingframe.htm)
or from Resea ch Genetics (info@resgae.com). BAC end page:

cervical dislocation followed by decapitation, the bullar was removed and opened in Leibowitz medium. The bony cappaule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fastrack kit (catalog # K1592-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR digapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Ptu DNA polymerase, ijated with EcoN was blunt ended with Ptu DNA polymerase, ijated with EcoN in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Seps00 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The cDNA was then directionally ligated to the thi-ZAP XR vector, which had been predigested with EcoN I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on Xil Blue MRF. "Cello I and the phage library was estimated to be 11,100,000 recombinants Stratagene's Exasist Interference resistence helper phage (catalogue # 211203) was adopted resistence belaemed DNA from the phages. Upon plating of the cecue plasmid DNA from the phages. Upon plating of the cecue plasmid DNA from the phages. Upon plating of the conting from 20 out of saturated culture with the Concert96 (TM) plasmid purification kit (Invitrogen) which and of the conversion of the concert96 (TM) plasmid p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Biosystems, Foster City, CA). Sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of panes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTS and 20% are unidentified."

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5, GAGAGAGAGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of subtraction to Rot = 20.0. Second strand cDNA was prepared with the primer adapter of sequence[5].

Sequence tag generated by 5, RACE of total RNA from gene trap ES

cell line. ES cell lines harboring insertion mutation of target

gene are available upon request from Sanger Institute Gene Trap

Resource. Annotation information available from

http://www.sanger.ac.uk/PostGenomics/genetrap/

Class: Gene Trap.
                                                                                                                                                                                                                                                                                            USDA, ARS, US Meat Animal Research Center

Single pass sequencing. Bases called with phred v0.020425.c and
trimmed with the aid of the trim_alt option. Vector identified with
cross_match v0.990329.
Plate: LAM8004 row: M column: 8
Seq primer: GTAATACGACTATAGGG.
                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Laurasiatheria; Cetartiodactyla; Ruminantia; Peccara; Bovidae; Bovinae; Bos.
